

Manni-Plex® Mg

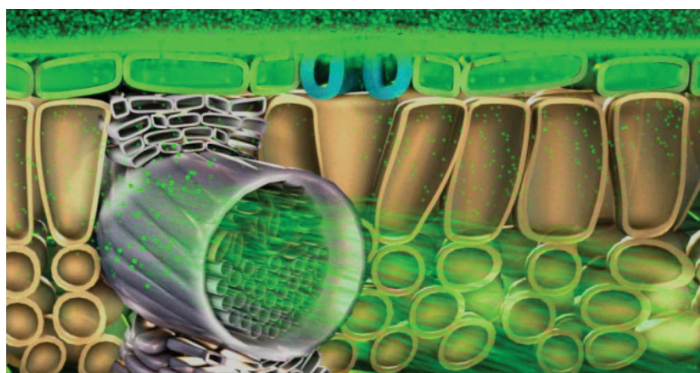

Advanced Foliar Nutrition

MANNI-PLEX MG is a proprietary foliar supplement that provides highly mobile and available magnesium to plant growing points. It is an excellent tool for preventing and correcting magnesium deficiencies, and enhancing overall plant health.

Applying MANNI-PLEX MG during the growing season helps ensure that adequate levels of magnesium are present.

MANNI-PLEX® MG Advantages

- More efficient than other forms of Mg
- Low molecular weight and particle form allows more Mg to penetrate plant leaves and translocate to growing points
- Proprietary formulation coats leaves and adheres to the leaf surface, making it available to the plant longer
- Ready-to-use liquid formulation can be tank mixed with most fungicides, insecticides and PGR's
- Magnesium is essential to chlorophyll production and the formation of sugar oil and fat. It also helps activate plant enzymes to promote new growth.

The molecular shape and structure of MANNI-PLEX® foliar nutrients allows the plant to absorb more nutrients at a faster rate.

Guaranteed Analysis

5-0-0

Total Nitrogen (N)	5.0%
4.7% Nitrate nitrogen	
0.3% Urea nitrogen	
Magnesium (Mg)	4.0%
4.0% Water soluble magnesium	

Derived from magnesium nitrate and urea.

Application and Use

Field, Row, Vegetable, Fruit, Tree and Vine Crops: Apply 1-2 quarts per acre per application throughout the growing season. At least 3 applications are recommended. More frequent applications at 1.5 quarts per acre may be needed to correct deficiencies once they occur. For pre-plant or sidedress applications, use 1-2 gallons per acre.

Ornamental Crops: Apply 1-2 quarts per 100 gallons water. Cover foliage thoroughly to point of runoff.

Optimum rate of application will vary depending on soil properties (such as pH, organic matter content, texture); weather conditions, time of year, general crop health and crop species. For best results, follow soil test or plant analysis recommendation.
