

Manni-Plex® for Papaya

Advanced Foliar Nutrition

MANNI-PLEX FOR PAPAYA is a proprietary foliar supplement that provides highly mobile and available zinc, manganese, copper and iron to plant growing points. It is an excellent tool for preventing and correcting deficiencies, and enhancing overall plant health.

Applying MANNI-PLEX FOR PAPAYA during the growing season helps ensure that adequate levels of Zn, Mn, Cu and Fe are present.

MANNI-PLEX® FOR PAPAYA Advantages

- More efficient than other forms of Zn, Mn, Cu and Fe
- Low molecular weight and particle form allows more nutrients to penetrate plant leaves and translocate to growing points
- Proprietary formulation coats leaves and adheres to the leaf surface, making it available to the plant longer
- Ready-to-use liquid formulation can be tank mixed with most fungicides, insecticides and PGR's
- Zn plays a role in protein synthesis and structural integrity
- Zn and Cu help strengthen the plant's immune system and natural defenses
- Mn plays a key role in photosynthesis and carbohydrate utilization
- Fe is critical to chlorophyll production

The molecular shape and structure of MANNI-PLEX® foliar nutrients allows the plant to absorb more nutrients at a faster rate.

Guaranteed Analysis

5-0-0

Total Nitrogen (N)	5.0%
2.5% Nitrate nitrogen	
2.5% Urea nitrogen	
Copper (Cu)	1.0%
1.0% Water soluble copper	
Iron (Fe)	0.5%
0.5% Water soluble iron	
Manganese (Mn)	2.0%
2.0% Water soluble manganese	
Zinc (Zn)	3.0%
3.0% Water soluble zinc	

Derived from urea, copper nitrate, iron nitrate, manganese nitrate and zinc nitrate.

Application and Use

Field, Row, Vegetable, Fruit, Tree and Vine Crops: Apply 1-2 quarts per acre per application throughout the growing season. At least 3 applications are recommended. More frequent applications at 1.5 quarts per acre may be needed to correct deficiencies once they occur. For pre-plant or sidedress applications, use 1-2 gallons per acre.

Ornamental Crops: Apply 1-2 quarts per 100 gallons water. Cover foliage thoroughly to point of runoff.

Optimum rate of application will vary depending on soil properties (such as pH, organic matter content, texture); weather conditions, time of year, general crop health and crop species. For best results, follow soil test or plant analysis recommendation.
